

JOYSTICK DRIVING

Experience a new and intuitive way of boat driving

Joystick Driving offers an easy way to maneuver with precision. It allows the driver to steer comfortably at all speeds with only one hand.

Autopilot

When Joystick Driving is activated, the Autopilot turns on simultaneously. The driver steers the boat by moving the Joystick. When the Joystick is released, the Autopilot is engaged and keeps a forward course. The set course can easily be changed on the Autopilot with a slight turn of the Joystick.

Electronic controls

Joystick Driving requires Volvo Penta IPS, Aquamatic Sterndrive or Diesel Inboard with electronic steering and the integrated Volvo Penta Autopilot. Since the function is integrated in the Joystick, no additional hardware is needed.

Enables ergonomic helm solutions

Joystick Driving enables comfortable and safe one-hand driving. The driver engages the function by simply pressing a button on the joystick. This allows for ergonomic helm solutions previously available only in commercial vessels and yachts. Up to six joysticks can be installed.

Joystick Driving offers an easy way to maneuver with precision – with only one hand.

JOYSTICK DRIVING

Experience a new and intuitive way of boat driving

Features and benefits

- Comfortable and safe driving
- Enables ergonomic helm solutions
- Intuitive and user-friendly interface
- Perfect response and control
- No additional hardware (integrated in the Joystick)
- Station handling, follows the rest of the helm station
- Fully EVC-integrated
- Up to six joysticks can be installed
- Developed and serviced by Volvo Penta (One point of contact)

Requirements

- Electronic steering (Volvo Penta IPS or Aquamatic)
- Volvo Penta Autopilot
- From EVC-E series

Joystick driving is turned on by pressing the upper right button on the joystick
